

Microsoft Dynamics CRM native functionality does not provide configurable business notifications or ad-hoc alerts. MTC Alerts add-on enables users to create and maintain alerts so end-users get notified immediately on opening the customer record.

How does it benefit?

1. Alerts are configurable to work with all CRM record types Including custom entities
2. Users can create, maintain multiple alerts.
3. Alerts can be added in bulk to CRM records based on a criteria
4. Alert types (informational, warning and critical) with color coded images help to differentiate and determine the significance
5. Optional alert expiration date, in-form notification and pop up features.
6. Deactivated alerts can provide alert history and can be reactivated as needed acting like templates.
7. Add-on is optimized to give better performance

Other information

1. First one year maintenance support includes live web based one hour of Installation. Technical support (Monday to Friday, 24/5) via e-mail and the web.
2. Annual maintenance renewal cost will be 25% of the product cost for future editions, upgrades, and technical support.
3. Partner NFR program, OEM, and custom development available from MTC to support unique needs
