**CRM Picture for Dynamics 365/CRM eases the way you capture and upload images on CRM records.**

Using CRM Picture, CRM users can achieve the following capabilities:

- Upload and add single image anywhere on the form for better data correlation.
- Upload and create a library of images which can later be set as display pictures for entities such as account, contact, lead, etc.
- Capture live images from webcam and set them as display pictures for entities such as account, contact, lead, etc.

CRM Picture makes it extremely easy to build library of images for setting as display pictures for entities such as account, contact, lead, etc.

Why CRM Picture?

- 3-in-one solution for building image library
- Simplified uploading of single and multiple images avoiding unwanted clicks
- Set images from library as display pictures for entities such as account, contact, lead, etc.
- Capture live webcam images for setting as display pictures for entities such as account, contact, etc.
- Keep your entity records distinguished with image tags
- Affordable and easy-to-use
